

About the career day

I went to the career day on 17th of April first walked around a bit what looking what stands there were. After that I wanted to go to the stand I probably will make my choice in for the next semester Generative AI

I talked with Lennart de Graaf and he told me about AI, Machine Learning & Data not my first choice but I was still interested. He also told me about the Generative AI even though he isn't really in that field but the one who was wasn't there at the time. After that I went to the upstairs to see potential of future internships. I didn't really find any that fit me yet. But I did get a lot of good connections with some companies that were of interest.
